ANALYST NOTE

Hera local LLM

An ROI of 87.88% with a Sharpe ratio of 1.61 appears strong, but the 50% win rate and max drawdown of 26.05% suggest high variance. The sample size of only two trades renders these metrics statistically insignificant, as two data points cannot establish a reliable edge or risk profile. The lack of statistical confidence means the results are likely noise rather than a robust strategy. You must increase the sample size to at least one hundred trades before drawing any conclusions. This expansion is necessary to validate whether the strategy possesses a genuine alpha or if the results were purely coincidental.
