ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1772 strategy failed catastrophically on VOXR with a -32.73% ROI and zero winning trades, indicating a fundamental mismatch between the signal logic and current market regime. A single sample of four trades is statistically insufficient to draw robust conclusions, yet the 45.89% maximum drawdown suggests extreme volatility exposure or poorly placed stops. The negative Sharpe ratio confirms the strategy generated returns significantly worse than the risk-free rate, likely due to overfitting or chasing a dead asset. Immediate action requires halting live deployment, analyzing the specific candlestick patterns of those four losses for outliers, and recalibrating entry thresholds before any further testing.
