ANALYST NOTE

Hera local LLM

The GG5_Stochastic_Oversold strategy failed catastrophically on SOL/USD, recording zero winning trades and a maximum drawdown of 46.26% against only four transactions. A Sharpe ratio of -2.49 confirms severe underperformance, indicating the stochastic logic is misaligned with current volatility regimes. Such a tiny sample size of four trades lacks statistical significance, making any historical backtest result unreliable for live deployment. We must discard this specific parameter set and retrain the model on a longer historical window to filter out regime-specific noise.
