ANALYST NOTE

Hera local LLM

The strategy delivered a 29.90% ROI with a 1.34 Sharpe ratio, but the 100% win rate is statistically meaningless due to only two total trades. This tiny sample size offers zero confidence in the model's robustness or ability to handle market volatility. The 17.75% max drawdown highlights significant risk exposure that is not adequately captured by the small profit margin. We cannot validate the signal logic or risk management parameters with such limited data. The immediate next step is to extend the backtest period to include at least one hundred trades before considering any deployment.
