ANALYST NOTE

Hera local LLM

The strategy failed catastrophically with a -32.73% ROI and 0% win rate across only four trades, indicating severe signal failure. A Sharpe ratio of -1.13 confirms negative risk-adjusted returns, while the 45.89% max drawdown highlights extreme capital erosion without recovery. Statistical confidence is negligible given the tiny sample size, making it impossible to distinguish random loss from systemic flaw. Next step: discard this configuration and rebuild entry logic using robust mean-reversion filters before retesting.
