ANALYST NOTE

Hera local LLM

The +19.49% ROI and 1.46 Sharpe ratio suggest strong risk-adjusted performance, but a 100% win rate on just two trades is statistically meaningless. With such a tiny sample, the results likely reflect luck or a specific market regime rather than robust edge. The 15.22% max drawdown is manageable but untested under volatility spikes. To gain confidence, you must extend the backtest to a minimum of 50 to 100 trades across varying market conditions. This will reveal whether the Bollinger Squeeze logic holds up or if the current metrics are an artifact of small-sample bias.
