ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2066 strategy on VOXR failed catastrophically, losing 32.73% of capital across only four trades with a zero win rate. A Sharpe ratio of -1.13 and a maximum drawdown of 45.89% indicate severe overfitting or a complete misalignment with current market volatility. Statistical confidence is effectively nonexistent due to the minimal sample size, rendering these metrics unreliable for live deployment. We must discard this parameter set immediately and re-evaluate the signal logic against a broader dataset to avoid further erosion.
