ANALYST NOTE

Hera local LLM

The strategy failed catastrophically with a -32.73% ROI and 0% win rate across only four trades. A Sharpe ratio of -1.13 confirms that losses consistently exceeded returns, while the 45.89% max drawdown indicates severe capital erosion. Given the minuscule sample size, these results lack statistical significance and likely reflect noise rather than a genuine edge. The primary failure is the complete absence of positive outcomes, suggesting the signal logic is fundamentally flawed or misaligned with current market conditions. Immediate recalibration of entry filters is required before any further deployment.
