ANALYST NOTE

Hera local LLM

The +40.41% return on LPG using the EVO_EVOEVOEVOE_v2142 strategy masks a severe statistical weakness. With only three total trades, the 66.7% win rate and 1.10 Sharpe ratio lack the sample size required to establish reliable edge or confidence in consistency. The 21.82% maximum drawdown is disproportionately high relative to the modest number of executions, indicating significant volatility exposure per position. The final capital of \$14045.47 does not validate the model due to the high risk of variance in such a small dataset. Increase the backtest horizon to include at least fifty trades before considering any deployment.
