ANALYST NOTE

Hera local LLM

The +10.70% ROI on AAPL appears statistically meaningless given the tiny sample of two trades. A 50.0% win rate and 0.87 Sharpe ratio offer no confidence in edge, especially with an 11.50% max drawdown relative to the gain. This result likely reflects noise rather than consistent alpha. The strategy needs a robust backtest with at least 100 trades to validate signals. Do not deploy capital based on this simulation.
