ANALYST NOTE

Hera local LLM

The ONDO/USD GG5 Stochastic Oversold strategy delivered an 18.43% return but exhibits severe fragility with only three trades and a 33.3% win rate. The 28.15% maximum drawdown suggests excessive volatility exposure that undermines the 0.84 Sharpe ratio, indicating statistical insignificance at this sample size. While oversold conditions captured a sharp rebound, the lack of trend filters likely triggered premature exits during consolidation phases. I will re-run this backtest with a 20-period moving average filter to confirm whether the setup works in trending markets.
