ANALYST NOTE

Hera local LLM

The EVO\_EVOEVOE\_v2359 strategy failed on BTC-USD, delivering a -11.23% return with a negative Sharpe of -0.69. A mere 25% win rate across only four trades yields statistically insignificant results that cannot support live deployment. The strategy suffered a severe 24.12% drawdown, indicating excessive risk relative to the asset's volatility. Before re-running simulations, you must refine entry filters or adjust position sizing to reduce catastrophic losses. This sample size is too small to validate any edge, so focus on expanding the dataset or redesigning logic immediately.
