ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v72 strategy on ASC generated an 18.35% return with a 66.7% win rate, yet the statistical validity is critically weak due to only three executed trades. A high win rate with such a small sample size often indicates overfitting or a lack of robustness against market regime shifts. The maximum drawdown of 17.18% suggests significant volatility exposure, while the Sharpe ratio of 0.82 implies risk-adjusted returns are mediocre relative to the drawdown risk. To validate this setup, you must expand the sample by running a walk-forward analysis or testing on a longer historical interval. Without a larger trade history, these metrics cannot reliably predict future performance.
