ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v51 backtest on AMD shows a sharp 87.88% return, yet statistical significance is negligible given only two trades executed. A perfect 50% win rate paired with a 26.05% drawdown reveals high volatility and an inability to sustain momentum without a larger sample size. While the Sharpe ratio of 1.61 suggests efficient risk-adjusted returns, the strategy lacks robustness for institutional deployment. We must expand the data window or adjust parameters to validate performance across multiple market cycles before considering live execution.
