ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v804 strategy on GOOGL produced a positive 6.75% return, yet the statistical significance is negligible given only three total trades. A 33.3% win rate paired with a subpar 0.54 Sharpe ratio and a 15.79% maximum drawdown suggests the strategy is prone to high volatility without consistent profitability. Such a small sample size renders any performance metrics unreliable and fails to confirm the robustness of the underlying logic. Before live deployment, you must run a longer backtest with adjusted parameters to validate if the signal logic holds under broader market conditions.
