ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOG_v513 strategy on VOXR failed, delivering negative returns and a negative Sharpe ratio due to a paltry sample of only three trades. With such a small dataset, the statistical confidence is negligible, rendering the 11.32% drawdown and low win rate unreliable indicators of future performance. The strategy likely struggled with volatility or poor entry timing, but the lack of data prevents a definitive technical diagnosis. Before redeploying capital, we must expand the backtest window to increase trade frequency and validate the signal logic against a broader historical range. This approach will provide the necessary statistical robustness to distinguish between random noise and genuine alpha.
