ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v41 backtest on VOXR yields a negative ROI of -2.01% with a Sharpe ratio of -0.05, indicating a statistically insignificant loss rather than a viable strategy. With only three trades executed, the sample size is too small to draw robust conclusions, yet the 33.3% win rate and 11.32% drawdown suggest poor entry timing. The results fail to demonstrate any edge, as the strategy generated negative returns with no risk-adjusted profit potential. Increasing trade frequency via parameter optimization or filtering is the mandatory next step to validate any alpha.
