ANALYST NOTEHera local LLM

The backtest shows a +87.88% return on only two trades, making the 1.61 Sharpe ratio statistically insignificant and the 26.05% drawdown highly volatile. While the strategy captured a strong move, the extremely low trade count prevents any reliable assessment of risk-adjusted performance or consistency. The 50% win rate suggests no clear edge exists in the current signal logic given such a narrow sample size. Immediate priority is to expand the test window to generate sufficient data points for robust statistical validation.
