EQUITY CURVE202 sessions · starting at \$9997.00

ANALYST NOTE

Hera local LLM

The strategy for VOXR generated a negative return of -2.01% with a Sharpe ratio of -0.05, indicating poor risk-adjusted performance. A win rate of 33.3% combined with a maximum drawdown of 11.32% suggests the logic fails to capture sufficient upside to offset losses. With only three total trades, the sample size is statistically insignificant, making it impossible to validate the model's robustness or edge. The final capital of \$9801.86 reflects a slight erosion of value rather than growth. You should expand the backtest period to at least fifty trades to establish a reliable baseline before further optimization.
