ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v647 strategy on LPG delivered a 42.10% ROI with a 66.7% win rate, yet the statistical significance is negligible given only three trades executed. A Sharpe ratio of 1.14 suggests reasonable efficiency, but the 21.82% drawdown indicates substantial risk exposure that the small sample size fails to quantify reliably. One trade generating disproportionate returns often masks poor underlying logic rather than confirming a robust alpha. To validate the edge, we must expand the test period or adjust parameters to generate a statistically meaningful sample size before deployment.
