ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1479 strategy on gold futures (GC=F) underperformed significantly, recording a -4.00% ROI and a negative Sharpe ratio of -0.36. With only three trades executed, the 33.3% win rate and 12.60% maximum drawdown lack statistical significance and suggest an overfitted regime rather than a robust edge. The sample size is critically insufficient to validate the signal logic, rendering these results anecdotal rather than predictive. We must reject this parameter set immediately and re-run the backtest with a broader historical window to assess stability across multiple market regimes.
