ANALYST NOTE

Hera local LLM

The LPG backtest shows a 42.10% return with a 66.7% win rate, yet the sample of only three trades creates severe statistical noise that undermines confidence in the 1.14 Sharpe ratio. While the strategy captured significant upside, the 21.82% maximum drawdown suggests high volatility risk that could erode gains during market reversals. The performance metrics are likely outliers rather than sustainable trends given the minimal trade count. Running a longer simulation with walk-forward analysis is necessary to validate robustness before live deployment.
