ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v689 backtest on AMD shows an impressive 87.88% return, but the strategy executed only two trades, rendering the 1.61 Sharpe ratio statistically insignificant. A 50% win rate with such low trade volume suggests the signal logic is either too restrictive or prone to overfitting on recent noise. The 26.05% maximum drawdown indicates substantial risk exposure that could not be validated due to the lack of historical sample size. We must expand the parameter space and run a walk-forward analysis to confirm robustness before deploying capital.
