ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v684 strategy generated an 18.35% ROI on ASC, yet the statistical significance is negligible due to only three trades. A win rate of 66.7% paired with a 17.18% drawdown suggests the sample size is too small to validate the edge or risk profile. The modest Sharpe ratio of 0.82 indicates returns were not adequately risk-adjusted relative to the volatility observed. Before deploying any capital, the strategy requires extensive parameter optimization and validation on a longer historical dataset to ensure robustness.
