ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_EVOEVOE_v693 shows a 42.1% ROI driven by just three trades, creating a fragile statistical profile where a single loss would drastically alter performance metrics. While the 66.7% win rate and 1.14 Sharpe ratio look promising on paper, the minimal trade count fails to validate robustness or signal consistency under real market conditions. The 21.82% drawdown indicates significant volatility exposure that the current sample size cannot adequately filter. We must increase sample size through extended historical simulation or walk-forward analysis to confirm edge reliability before live deployment.
