ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v736 strategy on VOXR failed, delivering a negative ROI of -2.01% and a Sharpe ratio of -0.05. With only three executed trades, the sample size is too small to draw statistically significant conclusions about the model's robustness. The 11.32% drawdown and 33.3% win rate suggest the entry logic lacks precision under current market conditions. A concrete next step is to expand the backtest window to gather more data points before deploying live capital.
