ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_GG1RSISNIP_v1026 shows a 42.1% return, yet the sample of three trades creates a low-confidence regime that masks real volatility risk. While the 1.14 Sharpe and 66.7% win rate are positive, a 21.8% drawdown indicates excessive exposure per position relative to the brief testing window. We must treat these metrics as preliminary noise rather than robust alpha before scaling capital. Next, expand the test to at least 50 historical trades to validate if the win rate persists across different market regimes. This data is educational only and does not constitute investment advice.
