ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1066 strategy on LPG shows a 42.10% return with a 66.7% win rate, yet the statistical validity is critically weak due to only three total trades. A maximum drawdown of 21.82% indicates significant volatility exposure that the small sample size fails to adequately capture or smooth. While the Sharpe ratio of 1.14 suggests risk-adjusted performance, such a metric is unreliable when derived from such limited data points. The lack of trade frequency prevents a robust assessment of the strategy's resilience across different market conditions. The immediate next step is to expand the backtesting horizon to accumulate at least 100 trades before deploying live capital.
