ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1081 strategy on NVDA failed to generate alpha, recording a 0.63% loss with a meager 0.09 Sharpe ratio and a 33.3% win rate. With only three trades executed, the statistical sample is insufficient to validate the logic or explain the 23.49% peak drawdown. The negative performance suggests the entry triggers are misaligned with current volatility regimes rather than a fundamental flaw in the code. Expanding the backtest window to capture more market cycles would clarify whether the strategy requires parameter optimization or a complete redesign. This analysis is for informational purposes and does not constitute investment advice.
