ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_WEBIDEA_v1608 shows a 42.1% return, yet the 21.8% drawdown and only three trades create severe statistical noise, making the 1.14 Sharpe ratio unreliable. A 66.7% win rate in such a small sample lacks institutional confidence and suggests overfitting or lucky timing rather than robust edge. The strategy likely captured a short-term anomaly rather than a sustainable trend given the lack of trade frequency. We must run a parameter sweep across multiple LPG cycles to validate if this performance holds outside the tested window. Do not deploy capital until the strategy demonstrates consistency over at least fifty trades.
