ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_GG1RSISNIP_v1126 shows a +42.10% ROI, but the 3-trade sample size renders the 1.14 Sharpe ratio statistically insignificant. While the 66.7% win rate suggests a directional edge, the 21.82% drawdown indicates high volatility and poor risk adjustment relative to the short sample. This result likely overfits recent noise rather than capturing a robust mean-reversion or trend pattern. The next step is to re-run the strategy on a 10-year dataset with stricter minimum trade filters to validate if the alpha persists.
