ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1162 backtest on VOXR failed, delivering a negative ROI and a non-positive Sharpe ratio across only three trades. With such a minimal sample size, the 33.3% win rate is statistically insignificant and likely reflects random noise rather than a genuine edge. An 11.32% drawdown indicates poor risk control during adverse conditions, rendering the strategy currently unviable for institutional deployment. You must expand the sample period or adjust entry filters to achieve a statistically robust dataset before reconsidering live allocation.
