ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1174 strategy on AMD generated an impressive 87.88% return, yet the sample size of only two trades renders these statistics statistically insignificant. A 50% win rate paired with a 26.05% maximum drawdown indicates that capital preservation relies entirely on outlier performance rather than consistent edge. While the 1.61 Sharpe ratio suggests favorable risk-adjusted returns, it is unreliable given the lack of trade frequency. We must expand the backtest horizon or adjust parameters to validate if this alpha holds under broader market conditions.
