ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1205 strategy on Gold futures failed, posting a negative return and poor risk-adjusted metrics. With only three trades executed, the statistical sample is too small to draw meaningful conclusions about the strategy's viability. The high drawdown of 12.60% suggests excessive risk exposure during adverse price movements. A reversion to the mean in gold prices likely triggered premature exits or missed reversals. Further tuning of entry filters or a complete redesign of the logic is required before live deployment.
