ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v366 strategy failed on VOXR with a negative ROI of -2.01% and a Sharpe ratio of -0.05, indicating a net loss relative to risk. With only three trades executed, the statistical sample is insufficient to confirm systemic flaws rather than random noise. A drawdown of 11.32% suggests poor risk control during the limited exposure period. The 33.3% win rate confirms the strategy is currently outperforming chance only slightly in a losing direction. The immediate next step is to expand the backtest window or adjust entry filters to generate a statistically significant sample size before live deployment.
