ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v659 strategy generated an impressive 87.88% ROI on AMD, yet a sample of only two trades renders these results statistically insignificant and prone to extreme variance. While the 1.61 Sharpe ratio suggests reasonable risk-adjusted returns, the 26.05% maximum drawdown indicates substantial volatility that could threaten capital during adverse market shifts. The 50% win rate offers no edge confirmation without a larger dataset to validate the strategy's consistency across different market regimes. Before deploying live capital, I recommend expanding the backtest window to at least 500 trades to achieve meaningful statistical confidence and identify robustness.
