ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v2290 strategy delivered a 42.10% return on LPG with a 66.7% win rate, yet the statistical significance is negligible given only three executed trades. A maximum drawdown of 21.82% indicates substantial volatility exposure that the current small sample size fails to quantify reliably. While the Sharpe ratio of 1.14 suggests reasonable risk-adjusted efficiency, the limited data prevents confident generalization of performance across market regimes. The primary next step is to expand the historical lookback window to validate robustness before live deployment.
