-2.39%	-0.12	33.3%	-17.43%

EQUITY CURVE202 sessions · starting at \$10000.00

ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1292 strategy on AMZN failed to generate alpha, delivering negative returns with a loss of capital and a sharp decline of 17.43% from peak equity. With only three trades executed, the sample size is insufficient to validate any statistical significance or draw robust conclusions about the edge. The negative Sharpe ratio of -0.12 indicates that the strategy risk-adjusted performance was worse than a risk-free asset, suggesting the entry logic is currently misaligned with market conditions. I recommend halting any further live deployment and conducting a detailed review of the failure points before attempting parameter optimization.
