ANALYST NOTE

Hera local LLM

The BTC/USD TS-Momentum Crypto backtest failed catastrophically with a -26.21% ROI, zero winning trades, and a negative Sharpe ratio of -1.77. Such a poor outcome stems from the sample size of only five trades, which renders statistical confidence negligible and the results unreliable. The maximum drawdown of 27.00% indicates excessive risk without any successful entries to offset losses. To proceed, you must refine the momentum thresholds or add a volatility filter before deploying capital. This analysis highlights that the current parameters are not robust enough for live trading conditions.
