ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1885 strategy on RDN failed catastrophically, delivering a -5.59% loss with a 14.78% drawdown across only three trades, resulting in a Sharpe ratio of -0.31. A zero win rate suggests the entry logic fundamentally misidentified market structure, likely executing during adverse trends or volatility spikes. With such a tiny sample size, these results lack statistical significance, but the directional loss confirms a severe flaw in the current signal generation. You must immediately re-evaluate the strategy's filters to prevent further capital erosion before any live deployment. The next step is a rigorous parameter optimization to identify a robust configuration that can withstand regime changes.
