ANALYST NOTE

Hera local LLM

The EVO strategy on LPG generated a 42.1% return, yet the 3-trade sample size severely limits statistical confidence for live deployment. While the 1.14 Sharpe ratio suggests acceptable risk-adjusted performance, the 21.82% drawdown and sparse data indicate significant instability. The high win rate of 66.7% is likely a statistical anomaly rather than a robust edge. Running a bootstrapping simulation with 10,000 iterations is the necessary next step to validate the strategy's consistency.
