ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1753 strategy generated a 21.45% ROI on MSFT with a modest Sharpe ratio of 1.12, yet the 50% win rate and 14.24% drawdown reveal significant volatility per trade. Statistical confidence is critically low due to only two total trades, rendering the performance data unreliable and prone to extreme variance. A single outlier trade likely drove the final capital to \$12,149.06, masking the true robustness of the entry logic. The immediate next step is to increase the simulation sample size by testing on a lower timeframe or expanding the equity curve window to validate consistency.
