ANALYST NOTE

Hera local LLM

The SPFI backtest shows a 9.19% return, but the 33.3% win rate and only three trades reveal statistically insignificant results. A Sharpe ratio of 0.75 suggests the risk-adjusted returns are mediocre, while the 8.27% drawdown indicates high volatility relative to the small sample. The GG7 Williams Oversold filter likely failed to confirm trend direction in this low-volume environment. We must increase trade frequency or broaden the strategy scope before drawing any firm conclusions on performance.
