ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2132 strategy on LPG generated a 36.29% ROI with a 1.04 Sharpe ratio, yet the statistical validity is critically weak due to only three executed trades. A 21.82% maximum drawdown alongside a 66.7% win rate suggests high volatility rather than robustness, making the performance unreliable for institutional deployment. Expanding the sample size through walk-forward analysis is the necessary next step to confirm whether the strategy captures genuine alpha or merely overfits to a narrow data window. Without additional historical validation, these metrics should not inform live capital allocation decisions.
