ANALYST NOTE

Hera local LLM

The EVO_EVOVELOCIT_v1530 strategy on RDN failed catastrophically in this simulation, recording zero wins and a negative Sharpe ratio of -0.31 against a max drawdown of 14.78%. With only three trades executed, the statistical sample is too small to draw definitive conclusions about the strategy's long-term viability or edge. The complete lack of profitable signals suggests the entry logic is misaligned with current market dynamics for this asset. Before further deployment, we must re-examine the signal generation parameters and validate them on a longer historical dataset with sufficient trade volume. This result indicates a need to recalibrate the filter conditions rather than immediate execution.
