ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v50 strategy on GOOGL generated a positive 6.75% return, but the statistical significance is critically low given only three trades. A 33.3% win rate paired with a 15.79% maximum drawdown suggests the strategy is highly sensitive to outlier moves rather than consistent alpha generation. The Sharpe ratio of 0.54 indicates that risk-adjusted returns are underwhelming and do not justify the capital exposure for institutional standards. To validate performance, run a forward-looking simulation with a wider sample size or adjust entry filters to reduce trade frequency.
