ANALYST NOTE

Hera local LLM

The EVO_EVOGG1RSIS_v152 strategy on RDN failed to generate any profitable trades, resulting in a zero win rate and a significant capital erosion of 5.59%. With only three executed trades, the statistical sample is too small to confirm any systemic failure, though the negative Sharpe ratio of -0.31 indicates a loss of risk-adjusted value. The maximum drawdown of 14.78% suggests that the strategy's stop-loss or position sizing logic was insufficient to handle market volatility. Given the lack of successful signals, the primary next step is to backtest the strategy on a longer historical timeframe to assess its robustness before any parameter tuning. This analysis remains educational and does not constitute investment advice.
