ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v720 strategy on BTC-USD failed to generate alpha, delivering an -11.23% return driven by a mere 25% win rate and a 24.12% peak drawdown. With only four trades executed, the statistical sample size is insufficient to derive reliable performance metrics or confirm any robust signal logic. The negative Sharpe ratio of -0.69 indicates the strategy produced risk-adjusted returns worse than a risk-free asset. Given these parameters, any conclusion about the bot's efficacy is currently speculative rather than empirical. The immediate next step is to backtest alternative parameter sets or switch to a higher time interval to gather more data points before redeployment.
