ANALYST NOTE

Hera local LLM

This backtest reveals a complete strategy failure on META, driven by zero winning trades and a catastrophic 33.28% drawdown. With only three trades executed, the results lack statistical significance and cannot support any generalization of performance. The negative Sharpe ratio of -0.85 confirms that losses significantly outweighed any theoretical gains in this simulation. Re-running the strategy with tighter entry filters or a higher minimum trade count is required before any deployment can be considered. This analysis serves solely as an educational assessment and does not constitute investment advice.
