ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v986 strategy on VOXR failed decisively, delivering a negative ROI of -2.01% and a Sharpe ratio of -0.05 with a maximum drawdown of 11.32%. With only three trades executed, the sample size is statistically insignificant, rendering the 33.3% win rate meaningless for any predictive confidence. The strategy lacked robustness, likely due to overfitting or poor parameter selection in a volatile environment. Immediate next steps require expanding the parameter space to test against different moving average intervals and volatility filters. Until statistical significance is achieved through a larger trade history, this configuration remains non-viable for capital allocation.
